

Business Requirements Document (BRD)

Initiative

Fitness Tracker V1 — UX/Product Expansion Plan (sample-screen aligned)

Business Goals

- Increase workout logging completion rate and consistency.
- Improve session quality through smarter exercise alternatives and effort tracking.
- Make weekly progress and muscle-volume insights actionable.
- Elevate product polish for stronger first impression and retention.

In-Scope Requirement Groups

BR-01: Superset Customization & Drag-and-Drop Editing

- Create supersets from 3-dot menu (`Create Superset`) using existing exercise picker flow.
- Enable drag-to-superset between existing workout exercises.
- Enable drag-in/drag-out for existing supersets (no separate split action).
- Support reorder via drag-and-drop.

BR-02: Safe Exercise Removal

- Remove exercise via 3-dot menu.
- Remove exercise via left/right swipe with red delete reveal and minimum trigger distance.

BR-03: Smarter Swap Alternatives

- Recommended alternatives = same muscle + same emphasized sub-region.
- Other alternatives = same muscle group alternatives.

BR-04: Schedule-Day State & Routing Logic

- Day card labels and behavior:
 - Future = `Preview`
 - Today = `Start`
 - Past = `Summary`
- Past/future open summary view variant.
- Today opens active workout tracking session.

BR-05: Completed/Future Workout Summary Variants

- Completed variant shows completed status + `View Workout` CTA.
- Future variant shows `Preview Workout` CTA.
- `View Workout` opens historical tracking data.
- `Preview Workout` opens tracking with empty kg/reps/effort.
- Warm-up action removed.

BR-06: Workout Schedule Interaction Upgrades

- Remove top title row and shift hero card to top margin.
- `Get Started` routes to same destination as today `Start`.
- Add day drag-handle icon and cross-day activity move.
- Auto-place rest day when workout is moved away.
- Long-press day card opens contextual add/remove workout submenu.

BR-07: Navigation / Information Architecture

- Remove AI chat icon from schedule top-right.
- Move account access into dedicated main-menu destination.
- Remove Lessons from main tab navigation.

BR-08: Coming Soon Experience

- Nutrition page: dedicated coming-soon design with icon + exact supplied flavor text.
- Lessons page: dedicated coming-soon design with icon + custom flavor text + `Coming soon` label.

BR-09: Dashboard Redesign (Landing Page)

- Research competitor workout apps.
- Deliver high-impact dashboard structure and visual hierarchy for first screen experience.

BR-10: Progress Redesign

- Build polished animated charts and trackers.
- Add editable time-range controls.
- Keep design opinionated and distinct.

BR-11: Account Settings Experience

- Full account settings page.
- Profile photo upload/edit/remove.
- Top banner image (default + replace flow).

BR-12: Effort, Set States, and Logging UX Fidelity

- Effort selector popup with strong visual background separation.
- In-progress and incomplete row visual states.
- Placeholder behavior from prior session for not-yet-completed sets.
- Read-only `Previous` column with prior effort marker.
- Up/down trend chevrons for unfinished sets.
- Updated done/PR icon behavior.

BR-13: Workout Completion & PR Rules

- Set completion requires reps + effort (+kg for weighted moves).
- Session progress bar updates by valid completed sets.
- Finish button state changes when all sets complete.
- Robust work/effectiveness PR model across sets/loads/reps.
- Per-set trophy indicator for new best set-level performance.

BR-14: Post-Workout Summary + Muscle Target Breakdown

- Finish action routes to summary screen.
- Summary shows target-muscle breakdown from exercise metadata.
- `View Workout` returns to that session's tracking page.

BR-15: Weekly Muscle Volume System

- Interactive muscle model (faceless/hairless) with tap targets.
- Track workouts completed, muscle coverage, and weekly volume %.
- Default weekly target = 6 sets per major muscle.
- Main target = 1.0 credit, secondary target = weighted credit (0.5/0.0 by evidence).

- Per-muscle color states by progress bands.
- Muscle detail popup with X/Y sets, remaining sets, contributions.
- Per-muscle custom weekly targets that update global volume calculations.

BR-16: Exercise Taxonomy & Evidence Mapping

- Validate primary/secondary/emphasized muscle metadata for all exercises.
- Align taxonomy with swap recommendations and weekly volume math.

Out of Scope for This BRD Revision

- Detailed technical implementation steps.
- Sprint sequencing and estimation.
- UI component-level specs.

Acceptance for This Planning Phase

- All user-requested feature tasks are captured at requirement level in PRD and BRD.
- Detailed implementation plans are deferred to per-feature execution documents.

Delivery Status Update — First Pass (Pre-Live Validation)

| Requirement | Status |

|---|---|

| BR-01 Superset customization (menu-based create) | Partially delivered (create flow shipped; drag/drop pending). |

| BR-02 Safe exercise removal | Delivered (menu remove + swipe safety interaction). |

| BR-04 Schedule-day state/routing | Delivered. |

| BR-05 Completed/future summary variants | Delivered (warm-up removed). |

| BR-06 Workout schedule UI updates | Partially delivered (title cleanup + CTA parity delivered; drag handle/long-press pending). |

| BR-07 Navigation IA updates | Delivered for Lessons removal and Account tab move. |

| BR-08 Coming soon experience | Delivered. |

| BR-09 Dashboard redesign | Initial shell delivered (full research-led redesign pending). |

| BR-11 Account settings experience | Initial shell delivered (media upload persistence pending). |

Engineering Validation (Pre-Live)

- Lint passes.
- Production build passes.
