

Product Requirements Document

Exported 2026-02-26 • Source: PRD.md

Task	task description	Status
Auth: Google sign-in flow	Shoo + Google sign-in UI and callback flow are wired and reachable from app entry.	Complete (tested)
Auth: Sign-out flow	Global sign-out control exists and returns user to auth screen.	Complete (tested)
Auth: User auto-provisioning	First-login user creation is implemented via `users.ensureUser`.	Complete (untested)
Bottom navigation foundation	App has a 5-item bottom nav and tab switching behavior.	Complete (tested)
Workout tab base page shell	Workout tab view exists with hero/schedule structure and skeleton states.	in progress
Progress tab base page	Analytics/progress page exists with stats, charts, and PR section scaffolding.	Complete (tested)
Lessons tab removal + account replacement	Remove Lessons tab and replace it with Account icon; Account must be right-most nav item.	yet to start
Nutrition coming-soon page design	Build a dedicated Nutrition coming-soon page with icon and exact flavor text: "A Good rule of thumb is swap the portion size of your protein and carbs, then double your veggies and fruit."	yet to start
Dashboard as landing page redesign	Research top workout apps and redesign Dashboard as high-impact app landing experience.	yet to start
Progress page full redesign	Build polished, animated progress dashboards with editable time ranges and glanceable insights.	yet to start
Account settings page	Build full account settings area with profile management controls.	yet to start
Profile picture upload/edit	Add user profile image upload, persistence, and edit/remove flows.	yet to start
Account banner upload/edit	Add top banner image (default first) with replace/edit support.	yet to start
Workout schedule top-row cleanup	Remove current top title row, move hero card to top margin, and align with requested layout.	yet to start
Workout schedule CTA parity	Ensure hero "Get Started" routes to same destination as current-day workout "Start".	Complete (untested)
Workout day status states	Implement day card labels/behavior: future=Preview, current=Start, past=Summary.	yet to start
Workout day drag-and-drop	Add drag handle icon on day cards and support moving workout/rest day activity between days.	yet to start
Rest day auto-fill behavior	Auto-place Rest day when a day has no workout after drag/reorder operations.	yet to start
Day-card long-press submenu	Long-press any day card to show add/remove workout actions based on card type.	yet to start
Workout summary (state-aware)	Make summary screen vary correctly for completed vs future workouts, with proper CTA text and behavior.	in progress
Remove warm-up action	Remove warm-up button from summary flow per product direction.	yet to start
Completed workout view flow	For completed sessions show completed status and "View Workout" that opens that historical logging session.	yet to start

Task	task description	Status
Future workout preview flow	"Preview Workout" should open tracking screen with empty kg/reps/effort fields.	yet to start
Post-finish destination	After finishing workout, route to completed/past summary screen variant.	yet to start
Active workout logging table	Base tracking table exists with set rows, inputs, completion toggles, and rest/add-set controls.	Complete (untested)
Weight field conditional rendering	Show KG field only for weighted exercises; hide/adjust for bodyweight where required.	yet to start
Set completion rules	Mark set complete only when required fields are filled (kg where applicable, reps, effort).	in progress
Exercise progress bar behavior	Session progress bar exists; must be aligned to strict completion rules and full session completion state.	in progress
Finish button completion state	Change Finish button style/state when all workout sets are fully completed.	yet to start
Effort selector popup	Effort popup exists; improve background/foreground separation to requested polished design standard.	in progress
Incomplete-set visual treatment	Implement nuanced row states for in-progress/incomplete sets as shown in reference screenshots.	yet to start
Previous column behavior	Populate non-editable Previous column from last session values with effort indicators.	yet to start
Placeholder carry-forward behavior	For uncompleted sets, show previous-session kg/reps as placeholders until user logs current values.	yet to start
Rep trend chevrons	Add up/down multi-chevron indicators for per-set rep trend vs prior sessions.	yet to start
Superset display foundation	Superset metadata rendering exists in workout summary and active workout views.	Complete (untested)
Superset creation from menu	Add "Create Superset" action in 3-dot menu for non-superset exercise and selection modal flow.	yet to start
Superset drag-and-drop operations	Support drag to create superset, drag into existing superset, drag out of superset, and reordering via drag.	yet to start
Superset split handling policy	No separate split action; rely on drag in/out mechanics to split/restructure supersets.	yet to start
Remove exercise via menu	Add remove exercise action in 3-dot menu with confirmations/safe behavior.	yet to start
Swipe-to-remove safety interaction	Add left/right swipe remove with visible red container and minimum swipe threshold before delete.	yet to start
3-dot menu feature parity	Implement full menu actions needed by product flow (swap/form guide/history/reorder/remove and final policy decisions).	yet to start
Swap screen foundation	Swap page exists with search, all/muscle grouping, and custom exercise creation.	Complete (untested)
Recommended alternatives logic	Implement recommendations for swaps based on same muscle + same emphasized sub-region.	yet to start
Other alternatives logic	Show broader alternatives that target same main muscle(s), distinct from recommended set.	yet to start
Exercise taxonomy enrichment	Add/validate per-exercise primary muscles, secondary muscles, and emphasized focus metadata.	yet to start
Form guide foundation	Exercise detail page has guide/history tabs, media support, and instructions section.	Complete (untested)
Effort color system in history/previous	Ensure effort indicators/colors are consistently represented across logging and history contexts.	in progress
Done badge behavior	Replace DONE text style with requested green check icon treatment once all required sets for exercise are complete.	yet to start

Task	task description	Status
PR badge behavior	Keep PR badge and trigger when average work for exercise exceeds prior session benchmark.	yet to start
PR calculation model upgrade	Replace max-weight-only PR logic with robust work/impact model (weight, reps, sets, session context).	in progress
Per-set trophy logic	Show trophy on set number when set beats all historical/current comparable set performance criteria.	yet to start
Workout history replay API	Add backend queries to fetch and replay full historical session data for "View Workout" flows.	yet to start
Schedule + history data linkage	Properly link `setHistory` and `workoutHistory` records for session-accurate reconstruction.	in progress
Weekly progress body model UI	Build faceless/hairless muscle model with per-muscle interactive highlighting.	yet to start
Weekly progress completion stats	Show weekly completed workouts + body coverage metrics on redesigned weekly progress experience.	yet to start
Weekly volume metric	Add total weekly volume % where 100% equals all muscle targets met (default 6 sets/muscle/week).	yet to start
Primary/secondary contribution weighting	Count main-target set contribution as 1x and secondary as reduced weighted contribution (e.g., 0.5x/0x per evidence).	yet to start
Muscle color thresholds	Implement per-muscle color states (red/dark-orange/yellow/green/electric-green) based on weekly volume bands.	yet to start
Muscle detail modal	Tapping a muscle opens deep-dive modal with progress, remaining sets, and exercise contributions.	yet to start
Per-muscle custom target editing	Allow custom weekly target sets per muscle and recalculate total body volume accordingly.	yet to start
Target muscles summary algorithm	Compute target-muscle percentages on summary screens using exercise-to-muscle mappings and session completion data.	yet to start
Backend authorization hardening	Remove client-controlled `userId` trust in mutations/queries; derive user identity server-side from auth context.	yet to start
Custom exercise privacy scoping	Restrict custom exercise visibility to owner (plus global/shared exercise library policy).	yet to start
Seed/admin safety hardening	Protect or remove seed/admin-like mutations from production paths.	yet to start
Schema validation hardening	Re-enable and enforce schema validation for data integrity and safer iteration.	yet to start
New-user workout bootstrap	Ensure newly authenticated users always get an initial program/schedule so workout tab does not remain in unresolved loading state.	yet to start
Validation pipeline	Add and enforce automated tests and checks to prevent regressions across frontend/backend/auth.	yet to start
